This is a dependable anti-virus software that can protect your mobile from being assaulted by malevolent programs. Zebra Virus Cleaner can identify and clean rootkits, Lasco, Cabir, Skulls, plus nearly a thousand of viruses including Trojans and worms from your smart phone. It also provides security for all your personal files and information. Zebra Virus Cleaner scans quickly and gets rid of viruses completely in real time, easy to adopt and has a friendly feature. The users can set the time to scan and update automatically.

### **The Kaspersky Anti-Virus**

With the growing recognition of smart phones and communicators, your phones may not be safe from malicious programs that were increasing both in numbers and variety. The Kaspersky Anti-Virus is the appropriate and reliable solution that will keep your mobile phones from such programs that affect the mobile platforms. It was developed and combined the latest technology of the Kasperky Lab technologies, experts in the antivirus field. Their solution offers competent armor for your smart phone and personal files.

### **Commander Mobile Anti-Virus**

One of the most effective defends against mobile phones harmful content, unwanted messages and malfunctioning applications is the Commander Mobile Anti-Virus. With this anti-virus, you can scan both the principal memory and memory cards, thus providing an absolute and prompt protection. It can detect viruses such as Cabir and thoroughly remove them from the system. All files are automatically inspected when they are copied, synchronized, modified, saved, or downloaded. This will definitely put off corruption of your mobile phone files.

### **F-Secure Mobile Anti-virus**

F-Secure Mobile Anti-virus is uncomplicated to adopt and does not need excess device resources or pointless user interaction. By design, it examines all files both in the device and on the memory cards. When a corrupted file is found, it is directly isolated to protect all the other data in the system. When the data connection is applied for emails and web browsing, the anti-virus database is updated unnoticeable in the background. F-Secure anti-virus also

safeguards mobile computing by bringing together an integrated anti-virus and firewall. This platform makes available a remedy and automated security through real time. The F-Secure Mobile Anti-Virus scans both the incoming and outgoing internet packets to thwart malicious, unsafe, or possibly destructive packets. F-Secure is also uncomplicated to apply.

These mobile software anti-viruses help us to stay composed and prepared for the attacks of malicious programs that can virtually impair the system of our phones. The defenses that they build into the network layer are the most valuable system of protection. In selecting mobile antivirus solution, look for the one that supports your device as well as its operating system. Also, the anti-virus software should be trouble-free to use, has over the air updates and a real time virus scanning and should scan all attachments for viruses. Although anti-viruses may significantly decelerate your mobile phone but it is beyond doubt the best protection.
